

About Disruptive Materials

- Disruptive Materials AB is a privately owned, dynamic, materials technology company based in Uppsala, Sweden. It is founded on its own unique and patented technology for the new material Upsalite® and the production thereof, a world record-breaking material set to create innovative products and solutions in target markets.
- The patent family protecting Disruptive Materials core innovative material Upsalite was approved in the first country during 2017 with approval in other commercially important regions and countries in 2018. Additional patent families are pending in accordance with the company's business strategy through continued research in Disruptive Materials own R&D department in collaboration with Uppsala University.
- Upsalite, Disruptive Materials' first innovative material, is a patented mesoporous magnesium carbonate. The pores in the material enable numerous possibilities that are beneficial in various ways including absorption of moisture, lipids, and odor, as well as the load and release of active ingredients such as perfume, antioxidants and chemical entities.
- Disruptive Materials plans to bring more cutting-edge materials to the market over time. Combining its own high-tech research and collaborations with world-leading partners, it is working to provide innovative solutions that can address customer needs in various markets.
- As its name implies, Disruptive Materials' modus operandi is to disrupt the status quo by delivering cutting-edge products and solutions that benefit society and address real-life problems.
- Disruptive Materials has external contract manufacturers to produce large-scale batches of Upsalite.
- Disruptive Materials currently has three divisions:
 - Pharma, Cosmetics and Sports.
- Disruptive Materials currently has a joint venture company in Asia and is actively working with European and North American industrial and academic partners.
- The first collaborative products released by Disruptive Materials include, an all-purpose powder spray, launched in September 2017 in China followed by a climbing chalk launched globally in October 2018.
- Disruptive Materials has partnered with Black Diamond, a premium brand in the sports segment, to produce an engineered climbing chalk, "Black Gold", that was released to the global market in October, 2018.
